

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

19, 1906, at Point Pelee, Essex County, Ontario. The bird was flushed from the ground and lit in a red cedar, giving an excellent chance to observe it, and I was fortunately able to take it. The bird was found about half a mile from the end of the Point on the west side. This is the first Canadian record.

MOCKINGBIRD. *Mimus polyglottos*.— I took a male on May 20, 1906, at Point Pelee, Essex County, Ontario. The bird was found near an old orchard on the west side about five miles from the end of the point.

In both birds the sexual organs were well developed.

Mr. B. H. Swales and Mr. P. A. Taverner were with me when both birds were shot.— JAMES H. FLEMING, *Toronto, Ontario*.

Wayne County, Michigan, Notes.— Secured a male Kentucky Warbler (*Oporornis formosa*) on May 6, 1906. The bird was in company with a pair of Ovenbirds in low swampy woods on P. C. 619, Gratiot Township. This is a rare bird in the State and the only county record. Visited a portion of Ecorse Township on May 9 and secured a male Blue-winged Warbler (*Helminthophila pinus*) on P. C. 49. This is the second record for the county, the first being a pair seen by me May 29, 1902. Also secured a male Orange-crowned Warbler (*Helminthophila celata*) in the same woods. This is the second county record and the first spring record. I also met with two female Wilson's Phalaropes (*Steganopus tricolor*) on P. C. 50 but failed to secure them. I have since spoken to Mr. P. A. Taverner in regard to them and learn that he observed one on the same grounds May 5. His was also a female and possibly one of the same birds seen by me. These constitute the only county records.— J. CLAIRE WOOD, *Detroit, Michigan*.

Notes from Connecticut.— The following specimens in my collection seem worthy of being recorded in 'The Auk,' as the races to which most of them belong are unreported from Connecticut. All were received in the flesh and almost all were shot by myself. Mr. Oberholser has kindly examined the representatives of western subspecies, except *Symphemia semipalmata inornata* and *Dendroica palmarum*, and agrees with my identification.

Symphemia semipalmata inornata.— Young female, Stony Creek, Aug. 15, 1897. Willets found at present on the Atlantic coast from Massachusetts south during the fall migration belong almost exclusively to this subspecies.

Accipiter velox. Of 20 female Sharp-shinned Hawks, chiefly young, which I have skinned since August, 1902, both ovaries were developed in 17. As a rule the left was the larger, but occasionally both were small and distinguishable from testes only by a magnifying glass. I suspect some unusually large 'males' in collections are in reality such females. I have also found both ovaries developed, though rarely, in *Accipiter cooperi*, *Buteo platypterus*, *Asio wilsonianus*, and *Cryptoglaux acadica*.
